

## CABLE OR ROPE SCRAPER

### Cable scraper with guide

Our scrapers are made of special anti-wear carbon steel and are hot dip galvanized. All standard scrapers include drill holes in both arms for easy rubber installation for better cleaning, should the customer request it.

There are two different types of scrapers:

1. Scrapers with guide. They are used in corridors where there is a steel U guide embedded in the concrete floor. The scrapers slide over the guide, thus preventing them from crossing into the corridor.
2. Scrapers without a guide. They are used in corridors without a guide.

Standard scrapers cover different aisle widths, from 2.20m to 6.00m

See references in price guide according to measurements.
