

DIGITAL PULSATION

Digital pulsation

Our pulsation control unit broadly covers all market needs:
Adaptable to different types of cattle (bovine, sheep, goat)
Simultaneous or cascade pulsation. Pulse frequency selection between 50 and 200. Pulse ratio selection from 20-80 to 80-20. It allows distinguishing between front and back udder part, being able to program different pulsation relationships between them. Digital display for display and control of parameters
