

VACUUM TANKS

Inox vacuum tanks

This 80l capacity boiler is completely made of AISI 304 stainless steel, being resistant to corrosion and vacuum. Given its capacity and its 90mm inlets, it is especially suitable for large installations. It is provided with a vacuum inlet with safety lock and two vacuum outlets, also 90mm for sanitary and pulsation. It has a removable security system, very useful to allow access to the interior in case of a possible revision or repair of the system, as well as a drain that facilitates cleaning and disinfection.
